

PCR LIPSTICK CASE

The lipstick cap and base are made from 100% PCR plastic, while the mechanism is virgin material. The overall claim is 66% PCR plastic case. The material is a combined PP/PE mix which was sourced using a recycling program in Europe. During the recycling process of PET beverage bottles, the caps (PE / PP) are shredded, hot- washed and dried. Cosmopak uses this material as the basis for its lipstick. The moulding is done in specially prepared moulds that are accommodating to the varying range of shrinkage rates we get on this material. The case can be made in a variety of colors and standard decoration options are available. "Cosmopak believes it has made a big leap forward as currently there is no PCR case available worldwide, and as plastic is not biodegradable, it is important to invest in recycling current material."
